

Focus on New Hampshire Forests

Information about New Hampshire forests to supplement
Project Learning Tree's Pre K-8 Environmental Education Activity Guide

About This Publication

Focus on New Hampshire Forests is for educators who wish to teach about New Hampshire's amazing forests. It answers questions like, how long do trees live in New Hampshire? Is all bark the same? What is the difference between a hardwood and a softwood tree? What products are trees made into? What else lives in the forest? And it answers these questions in a way that is most useful to you – the educator trained in Project Learning Tree's award-winning curriculum.

Focus on New Hampshire Forests provides details about our forests for the nine activities that are most popular among educators trained in the PLT Pre K-8 Environmental Education Activity Guide. In most cases, the information enhances the materials provided in the activity guide. In one case, the information replaces the background material and in another, a new student page is provided. For all activities you will want to use the PLT Pre K-8 Activity Guide and Focus on New Hampshire Forests together. For each activity you will also find correlations to the New Hampshire frameworks in science and literacy. At the end, there is contact information for public and private organizations that manage and/or protect natural resources in the state. Finally, there is a page about the programs NHPLT provides, along with a description of secondary teacher resources.
